

# Dworshak Refill Analysis

**Notes:**

1. This graph was created by the NWW Water Management team.
2. The data used to produce the elevations on the graph are from the ESPF10 dataset recorded from the NWRFC point at DWRI1.
3. The data is in the NAD29 datum.
4. Data expressed in the graph is a probability-based analysis on 04/01/2024 and does not represent the actual conditions that may occur due to change in weather or operational circumstances.
5. Reservoir likely to hit full pool of 1600 ft between 1<sup>st</sup> of June and 4<sup>th</sup> of July.
6. Data based on minimum discharge (1700cfs) through refill.
