

The Operational Request:

Starting as soon as possible on/or after April 23rd increase flows from Chief Joseph Dam in the range of 12-18 kcfs (if coulee is releasing in the 140's kcfs range) to achieve 155 kcfs or higher per day average until April 30th. It is estimated that this should be no more than 4-5 feet draft at Grand Coulee depending on inflows.
