

WILLAMETTE VALLEY FISH PASSAGE MONITORING – BULK MARKING & RESERVOIR DISTRIBUTION

Bi-Weekly Report: September 1, 2023 – September 15, 2023

Prepared for: United States Army Corps of Engineers

Prepared by: Cramer Fish Sciences

September 22, 2023

BULK MARKING SCHEDULE

Table 1. Tentative release schedule for brood year 2022. Green rows highlight the release groups that have been tagged and released so far this year. Orange rows highlight release groups that have been tagged but have not yet been released.

Release Year	Release Date (estimated)	Release Basin	Release Area	Release Location	Life stage	N

BULK MARKING SUMMARY

During the recent reporting cycle, Cramer Fish Sciences staff tagged 31,834 juvenile Chinook salmon. This effort completed the tagging requirements for the McKenzie River basin's fall release groups. Having finished tagging the McKenzie River groups, we have now fulfilled the tagging needs for all fall release groups across all basins (Table 2).

While no releases occurred during this reporting period, our crews invested significant time in preparations for upcoming releases scheduled for mid- and late-September (Table 3).

Recaptures

There were no new recaptures during this reporting period. There have been five recaptures of PIT tagged fish so far this year (Table 4).

Table 2. Bulk marking summary statistics. Total number of fish marked (N), mean fork length (FL), mean weight, start date of marking, end date of marking, total mortalities from start of tagging to release, mortality percentage, total shed tags from start of tagging to release, and shed tag percentage.

Mark Group	N	Mean FL (mm)	Mean Weight (g)	Date Start	Date End	Morts	Mort. %	Sheds	Shed %

Reservoir Distribution Summary

Reservoir sampling during the reporting period was conducted using 30' small mesh suspended gill nets on Lookout Point (9/3/2023-9/9/2023) and Green Peter (9/10/2023-9/16/2023) reservoirs (Table 5). This was the first reporting period where vertical temperature and dissolved oxygen profiles were taken from the surface to the lake bottom or up to 100m depth. Previously, our YSI was limited to 30m profiles.

On Lookout Point Reservoir, surface temperatures averaged 20.6 C (Table 6). In the forebay, 19-20C extended from the surface to 18m, 18-19C was observed from 18-33m and 14-16C was observed from 33-36m (max depth 36m). In Lookout Point reservoir, nets were set at 10-20m depths for the first 2 days of sampling. For the final 2 sampling days, nets were lowered to 33m where possible to target 15C or were set near the site's maximum depth. Over four days of sampling, six juvenile walleye (mean fork length 144 mm) were captured (Table 7). No Chinook were captured during this reporting period on Lookout Point Reservoir.

On Green Peter Reservoir, surface temperatures averaged 22.9C (Table 6). Temperatures in the forebay remained above 20 C down to a depth of 17m. Temperatures of 18-20C extended from 17-20m with 14-16C observed from 21-23m depth. The top of the nets were set at 20m where possible to target 15C (15C observed at 21.2m). No fish were captured over 4 days of sampling.

Table 5. Start and end date by statistical week.

Week	Start	End	Reservoir	Net Type	Effort
24	6/11/2023	6/17/2023	Green Peter	oneida	47.7 hours
25	6/18/2023	6/24/2023	Green Peter	box minnow	746.5 hours
25	6/18/2023	6/24/2023	Green Peter	oneida	304.1 hours
26	6/25/2023	7/1/2023	Lookout Point	box minnow	682.7 hours
