## Summary of Rotary Screw Trap Data

Rotary screw traps were operated at the following 15 locations: Breitenbush River, Detroit Head of Reservoir – North Santiam, Big Cliff Dam Tailrace, Green Peter Head of Reservoir – Middle Santiam, Green Peter Dam Tailrace, Foster Dam Head of Reservoir- South Santiam, Fall Creek Dam Tailrace, Cougar Dam Head of Reservoir, Cougar Dam Tailrace, Hills Creek Head of Reservoir- Lookout Point Head of Reservoir- Middle Fork Willamette, Lookout Dam Tailrace, and Dexter Dam Tailrace.

The RSTs located at Breitenbush River, Detroit Head of Reservoir – North Santiam, Green Peter Head of Reservoir – Middle Santiam, Foster Dam Head of Reservoir- South Santiam, Cougar Dam Head of Reservoir, and Hills Creek Head of Reservoir- Middle Fork Willamette did not sample from December 1<sup>st</sup>, 2024 through January 31<sup>st</sup>, 2025.

Winter Steelhead (*O. mykiss*) may be present in the Santiam Basin. All natural origin juvenile *O. mykiss* captured at these sites will be reported as Winter Steelhead.

This report was written by Environmental Assessment Services, LLC (EAS) for Cramer Fish Sciences under contract W9127N19D0009. It contains season totals from data starting on January 1<sup>st</sup>, 2025 but incorporates operations from previous years sampled.

Sampling start dates are included in Table 2, and season total collection numbers are displayed in Table 3. The locations of the RSTs are depicted in Figure 1 through Figure 15.

## Breitenbush River

The Breitenbush River RST was installed January 23<sup>rd</sup>, 2025 and began February 1<sup>st</sup>, 2025. All natural origin *O. mykiss* captured at this site will be reported as Winter Steelhead.

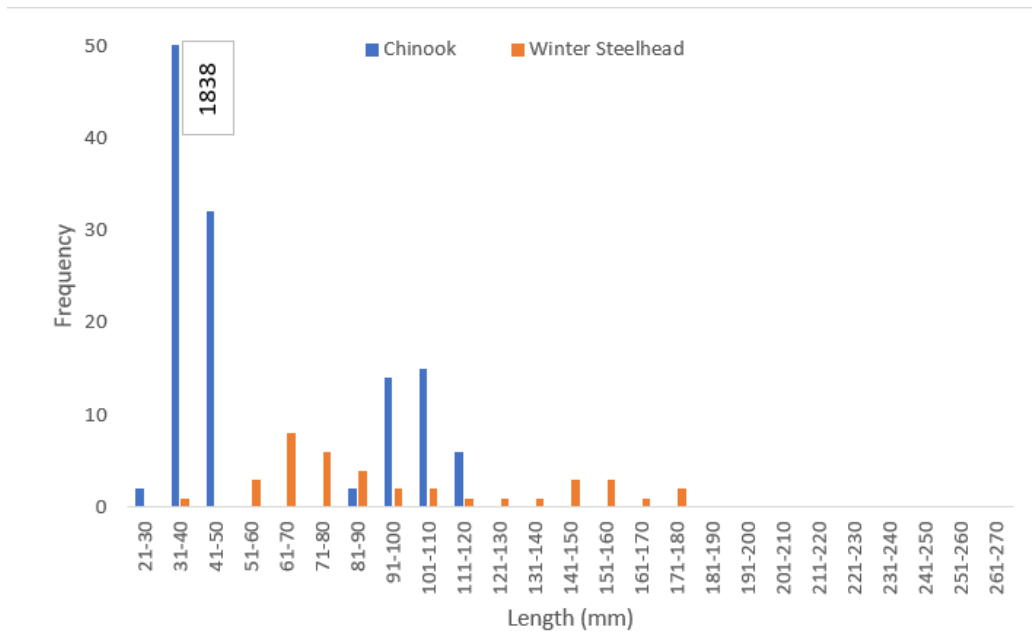

### Target Species

There were a total of 286 Chinook Salmon (CHS), and 2 Winter Steelhead (STW) captured during the reporting period (Figure 16). Sampling duration was 68.8% of the reporting period for the 5ft RST. The RST was raised to the non-sampling position on March 15<sup>th</sup>, 21<sup>st</sup>, and 26<sup>th</sup> due to an incoming storm surge. The RST was lowered into the sampling position on March 17<sup>th</sup>, 22<sup>nd</sup>, and 29<sup>th</sup>, respectively. Figure 17 shows length frequency data to-date. Table 4 provides life stage, length, and weight data for all Chinook Salmon and Winter Steelhead that have been caught at the Breitenbush River site to-date and for the reporting period.

### Stream Statistics

Basic stream statistics at Lookout Dam Tailrace site were calculated from data downloaded from the U.S. Geological Survey stream gauge number 14149010 (Figure 83). Stream temperatures were recorded every 2 hours using temperature probes at the PH and Spill Lookout Dam RST's during this reporting period. Temperature probes operated normally, and the data is shown below in (Figure 84 and Figure 85). Flows through the Powerhouse and Spill during the reporting period are displayed in Figure 86. Catch per unit of effort (CPUE) data are summarized in Table 76. Discharge and capture data for the duration of monitoring efforts at this location are provided in Appendix B.

## Middle Fork Willamette River– Dexter Dam Tailrace

The RST in the Dexter Dam Tailrace began sampling under contract W9127N19D0009 on December 16, 2023. Sampling at Dexter Dam Tailrace prior to December 16, 2023, was conducted by EAS for the USACE under contract W9127N19D0007.

On November 7, 2023, the Dexter Dam Tailrace RST was moved to a new sampling site further downstream to allow construction crews to perform work at the Dexter Fish Facility. The trap will be sampled at this location until construction activities at the facility are completed.

### ***Target Species***

For the reporting period, there were 0 Chinook Salmon (CHS) captured (Figure 87). Sampling duration was 100.0% of the reporting period for the RST. Table 77 provides life stage, length, and weight data for all Chinook salmon that have been caught at the Dexter Dam site to-date and for the reporting period. Figure 88 shows length frequency data to-date for Chinook Salmon.

### **Stream Statistics**

Basic stream statistics at the Dexter Dam site were calculated from data downloaded from the U.S. Geological Survey stream gauge numbers 14149510 and 14150000. Gauge height (feet) is the only metric provided at gage 14149510 (Figure 89). Total dissolved gas saturation data was received from gauge 14150000, 4.75 rkms downstream of the trap (Figure 90). Stream temperatures were recorded every 2 hours using a temperature probe at the Dexter Dam RST site during this reporting period. The temperature logger operated normally throughout the reporting period. Temperature data from the reporting period can be seen in Figure 91. Flows through the Powerhouse and Spill during the reporting period are displayed in Figure 92. Catch per unit of effort (CPUE) data are summarized in Table 80. Discharge and capture data for the duration of monitoring efforts at this location are provided in Appendix B.
